

## **Olameter Enhances AMI Network Monitoring & Integration Platform Capabilities**

**April 15, 2008. Aurora, Ontario** - Olameter Inc. today announced the release of *inView* version 3.0, which includes functionality enhancements as well as comprehensive architecture modifications.

Offered to utilities across North America, Olameter's *inView* application integrates with multiple Advanced Metering Infrastructure (AMI) data collection systems in order to provide automated and operator-based AMI Network monitoring and analysis tools, including reporting and down stream conversion/integration, via a secure web interface. This application significantly reduces the time and effort required for utilities to become aware of and respond to AMI Network and field issues, allowing them to maintain a continuous and reliable flow of AMI data to and from the back office enterprise systems.

The version 3.0 release includes enhanced meter inquiry tools, real-time or schedule-based event notification, enhanced geo-mapping utilizing the power of the Google Earth™ Satellite imagery, and support for additional import/export/synchronization file formats. Also within this release, the system architecture was modified to improve performance and reliability for increasingly time-sensitive functionality.

Olameter, headquartered in Montréal, Quebec, with facilities in Aurora and Mississauga, Ontario, provides IT solutions, field operations, and meter sales and service to utilities across North America. Olameter's IT solutions include *inView*, Consumer Web-Presentation, Mobile Workforce Management, application hosting, and Billing applications and services. The *inView* offering specifically supports the data requirements surrounding AMI, providing a central portal for the monitoring of system health across deployments of one or more metering technologies.

"*inView* is a unique system within the AMI marketplace, and Olameter is dedicated to its evolution and on-going improvement," said Brent Williams, Olameter's Vice President of IT Solutions. "Our clients have achieved efficiencies and greater insight into their AMI Networks operations through the use of *inView*, and the version 3.0 enhancements will provide increased system awareness and control. Through on-going consultation with clients and industry observation, Olameter's *inView* application will continue to evolve, meeting the needs of clients today and into the future."

### **About Olameter**

As a leading independent meter service company, Olameter offers a full range of telemetry and back-office systems for electric, gas, and water utilities. IT Solutions, Field Services, and Meter Shop Services are offered individually or in combination as a turn-key solution.
